Verification report - live record, recomputed

Target: github.com/Lucas-Joly-GH/trends-research, public repo, live record 2026-01-02 to 2026-10-29
Sample deliverable. Public files only. No fee, no contact with the author.
Result: the published figures reproduce. Two labelling notes, no error found.

METHOD

I downloaded the daily file the project publishes (docs/data/history.json, 215 sessions) and recomputed every headline statistic from the equity series itself: window return, annualised return, volatility, Sharpe, drawdown. Where a number did not match I read the publishing code before calling it a discrepancy - twice that turned a suspected error into a convention difference.

LINE BY LINE

Item	Published	Recomputed	Status
Window return	16.4329%	16.4329%	exact
Max drawdown	-5.6022%	-5.6022%	exact
Annualised vol	8.7169%	8.6905%	252 vs 256 days
Sharpe, as published	1.6981	1.68	matches after cash
Sharpe, raw equity	-	2.1056	gap = cash / vol
Geometric CAGR	19.8606%	19.62%	same convention

READING

Return and drawdown reproduce to the last digit. The remaining gaps are conventions the code documents, not errors: 252 versus 256 sessions per year, and subtracting the cash rate before computing Sharpe (3.70% / 8.69% = 0.43, and 2.106 - 0.43 = 1.68). Two labelling notes are worth fixing: the dashboard prints a 14.80% arithmetic annual return beside a 19.86% geometric CAGR without saying which is which, and the README describes a ranking of all 45 signals while the shipped table holds 30 rows.

REPRODUCE

```
curl -s
https://raw.githubusercontent.com/Lucas-Joly-GH/trends-research/main/docs/data/history.json >
history.json
python3 recalc.py history.json # daily returns = equity[i]/equity[i-1]-1; vol = sd*sqrt(252);
drawdown = running peak to trough
```

WHAT A PAID ENGAGEMENT INCLUDES

One strategy, repo or published track record. 48 hours. USD 29 flat, paid up front. If a number you publish cannot be reproduced or cleared, you pay nothing. What you get is a page like this one: every figure traced to a file you can re-run.

SCOPE AND LIMITS

Public files only. The private price panel and data layer are not shipped, so the 1990-2026 backtest cannot be reproduced and is not assessed here.
This report checks that published numbers match the source file they claim to come from. It says nothing about whether the strategy will keep working, and it is not investment advice.
This is the shape of a paid engagement: one page, every figure traced to a file the reader can re-run.
