Two findings: accepted, then the code changed

Independent public reviews of published backtest numbers, 2026-10-08 to 2026-11-01
2 cases. Both answered by the maintainer. Both followed by a change in their repo.
No engagement, no fee, no account access.

METHOD

Each case opened with one number taken from the target's own published work, a way to reproduce it, and a claim that could be checked against their data. Where the target pre-registered a prediction, the order of prediction and result was checked before the result was read.

WHAT CHANGED

Case	Claim	Outcome
mr-scrooge #9	Promotion bar did not scale with ~1,000 trials	ratchet + bug fixed
pineforge #664	341 of 7,989 probes at 100x PnL tolerance	regrade due Nov 4

READING

Two threads, one number each: -$1,308.74 over 1,041 trades (t ~ -3.0), and 341 of 7,989 probes graded at a 100x wider PnL tolerance. In both, the maintainer accepted the number; in both, the repository changed within the same week. Neither case was billed.

REPRODUCE

```
Case 1: github.com/pineforge-4pass/pineforge-engine/issues/664
Case 2: github.com/BrockStar3540/mr-scrooge-v6/issues/9
Scripts and outputs: github.com/rytjy/backtest-audit-kit/tree/main/audits
```

SCOPE AND LIMITS

Not paid work: no invoice in either case. One party states it does not buy audits; the other was never asked.
Outcomes are the targets' own statements. The pineforge regrade is a commitment due 2026-11-04, not a result.
Not a base rate: 23 public threads opened, 7 answered (30%), 0 paid.
