Sample audit: 37 Collective2 strategies

Subject: leaderboard screen, 37 public strategies (collective2.com/leader-board)
Date: 2026-11-07 | Scope: one pass, public pages only, no login
Deliverable: one page + the parsed table (c2-screen-20261107.txt)
Coverage: 36 of 37 pages live and complete; 1 inactive (89 monthly cells, all zero)

METHOD

37 ids from the server-rendered leaderboard. Each details page parsed for its monthly table; yearly cells compounded locally against the printed YTD; annualised return recomputed as eq^(365/days)-1. Four checks per strategy: best-3-month share of log return, annual return vs max drawdown, length of record, win-rate edge vs break-even.

RESULT (36 ACTIVE STRATEGIES)

Check	Hits	What it means
Concentration > 70%	19	best 3 months carry >70% of log return
Annual / drawdown > 2.5x	11	return large vs reported max drawdown
History < 18 months	11	annualised figure on a short record
Edge < 2 SE	3	win rate not distinguishable from break-even
No flag at all	14	checked, nothing found - also a deliverable

READING

Arithmetic reconciles: every year's monthly cells compound to the printed YTD within 0.4pp, and the annual figure uses calendar days (error -1.6 to +0.2pp on 5 strategies). The platform is not the problem. 152974419: 14 months, +55.6%, annual 49.2%, max DD 7.5%, and one +24.1% month carries 84% of the log return. 152326039: best 3 months = 194% of the total, so the rest of the record is net negative. Coverage and live/dead status are printed next to every number, because a missing cell silently becomes 0 in a sum and 1.0 in a product.

SCOPE AND LIMITS

Eligible set = the 37 ids the leaderboard publishes; disappeared strategies are not recoverable, so survival bias beyond that set is not measured.
Leaderboard is a selection: winners only; strategies that disappeared are not measured.
Concentration uses log contributions; a share above 100% is arithmetic, not a bug.
All figures hypothetical per platform disclaimer; no broker statements were seen.
Edge test assumes fixed average win/loss, an approximation.
